BASEhabitat | Postgraduate Architecture for Change

Master of Arts (CE)

2026/2027

The Postgraduate is aimed at professionals and graduates in architecture who wish to learn and enhance their skills and abilities by expanding their outreach to address social and environmental issues.

The programme, combining theoretical knowledge and practical experience, explores the practice of architecture in a different way, involving diverse actors within the design process, understanding the implications of design decisions by focusing on in-depth choices of materials and construction methods. It is taught by an international panel of renowned visiting architects and academics and the teaching staff of BASEhabitat. The approach focuses on hands-on experience, in a context of professionals from various disciplines and an international learning environment.

- 1. THEORY AND DESIGN | MARCH - SEPTEMBER 2026
- 2. HANDS-ON EXPERIENCE | OCTOBER - DECEMBER 2026
- 3. MASTER THESIS | FEBRUARY - JULY 2027, THESIS DEFENCE: SEPT 23-24, 2027

As today's construction activities are extremely resource intensive and harmful to the environment and our climate, special attention is given to natural building materials which have been the focus of BASEhabitat for the past 20 years.

The BASEhabitat | Postgraduate is a full-time study programme taught in English lasting one and a half years, divided into three terms (theory and design, hands-on experience and master thesis), at the end of which students receive a Master of Arts in Continuing Education MA (CE) from the University of the Arts Linz.
